Scenario mapping

A scenario map is a visual representation of a user's journey or experience with a product or service. It helps teams understand and empathize with users by mapping out their actions, thoughts, and emotions at each step of the journey.

The scenario map template helps you:

- Map out all the steps in a specific scenario

- Empathize with users and their experiences with your designs

- Brainstorm with your team, and identify problems and opportunities for improvement

- Prioritize and get aligned on next steps

User friendly UI

It must have multi platform support

It should be able to link with google drive and other platforms

It should be available in both App and Web platform

Should be able to collaborate with others

Apps should have record meeting option for the ease of students

App should be able to automatically adjust the video streaming quality according to speed of Internet to avoid video freeze

App should have a feature to pre schedule meetings

Students should be able to upload their documents

Faculty should be able to take attendance

Faculty should be able to remove and add participants in meeting

Faculty should be able to keep a track of students who submitted the assignments

Faculty could easily share the notes to the students on the platform

App should use less animated graphics so that it consumes less data

App should allow users to change streaming video quality so that user can minimize data usage

App could allow user to turn off video streaming if user wants only to listen the voice it will also save the data significantly

App should have a option to download content to make it available offline
